

INSTALLATION INSTRUCTIONS FOR CHRYSLER
ADAPTER/SPACER PLATE PART# 980055

List of Enclosed Parts:

- (1) 1/2" Chrysler Adapter/Spacer Profile Milled Plate
- (2) 1 5/8" Long Dowels

Important: Be sure to use 1/2" longer bell housing bolts to accommodate plate thickness.

The Chrysler Adapter/Spacer Profile Milled Plate is for use with all Big Block Chryslers using the stock starter location. This plate can be used either as an adapter to adapt GM transmissions to Big Block Chryslers or to space out Chrysler transmissions to accommodate for a 1/2" longer converter needed in high horsepower engines.

It will be necessary to accommodate engine and/or Trans placement for the extra 1/2". This can be accomplished possibly by moving the engine a 1/4" forward and the transmission a 1/4" back. Be sure drive shaft yoke will not bottom out in the transmission.

Starter mounting studs should be removed from transmission and screwed into plate.
